

2.5" LCD Monitor Instructions

- 1) Remove all of the items from monitor box.
- 2) Plug the charger into the monitor and charge until the LED indicator turns green.
- 3) Assemble the housing according to the housing assembly instructions.
- 4) Locate the cord that plugs into the camera and monitor. The small male end of the cable plugs into the AV port of the monitor. The other end will have one of the 3 different cable assemblies offered with this monitor; 1) RCA Male plug—plugs into the yellow RCA female on the camera 2) 1/8 inch mini plug that plugs into yellow 1/8 inch female hole on the camera and 3) RCA Female that plugs into the yellow adapter cord that comes with your camera. This cord has the red, white and yellow RCA males on one end and the other plugs into the digital output on the camera.
- 5) There is an extra cable with no end on it. Disregard this cable. It can be wired directly to an E/O Bulkhead later if you choose to.
- 6) Turn on the LCD.
- 7) The monitor should now be showing what the camera is viewing.

In order for the battery to have maximum lifespan, fully discharge the battery before recharging it. Overcharging will also shorten the lifespan of the battery.

*Please note: There are brightness and color control wheels on the side of the LCD monitor for adjustments.
